

Quick Activity 2: Canteen Group Order

!. Problem Analysis

The program will calculate the total cost of group order in the canteen by multiplying the quantity of each food item by its unit price, then adding all subtotals.

The program should determine:

- The cost of each ordered item.
- The total bill for the group.

2. Inputs - Process - Outputs

Input	Process	Output
Quantity and price of burgers	Multiply quantity x price	Burger subtotal
Quantity and price of fries	Multiply quantity x price	Fries subtotal
Quantity and drinks	Multiply quantity x price	Drinks subtotal
All Subtotal	All subtotal	Total cost

Formula:

- $\text{Subtotal} = \text{Quantity} \times \text{Unit Price}$
- $\text{Total Cost} = \text{Sum of all Subtotal}$

3. Decomposition

The problem can be divided into these steps:

1. Get the quantity and price of each food item.
2. Complete subtotal for each item.
3. Add all subtotal.
4. Display the total bill.

4. Pseudocode

START

INPUT burger_quantity

INPUT burger_price

INPUT fries_quantity

INPUT fries_price

INPUT drinks_quantity

INPUT drinks_price

burger_total = burger_quantity * burger_price

fries_total = fries_quantity * fries_price

drinks_total = drinks_quantity * drinks_price

total_cost = burger_total + fries_total + drinks_total

DISPLAY burger_total

DISPLAY fries_total

DISPLAY drinks_total

END

6. Dry Run — Test Case 2

Given:

- 5 burgers x ₱55 = ₱275
- 5 fries x ₱45 = ₱225
- 5 drinks x ₱35 = 175

Calculate:

Item	Quantity	Unit Price
Burger	5	₱275
Fries	5	₱225
Drinks	5	₱175

Total Cost = ₱275 + ₱225 + ₱175

Output

Total cost: ₱675
